THE WIDEST SELECTION OF WINDOWS IN EUROPE

EXCELLENT

6-chamber profile system combined with new, reliable, multi-point sealing and triple-glazing units allows us to achieve the best parameters of thermal insulation on the market among other PVC windows. EXCELLENT series is designed for energy-efficient construction.

FUTURE

FUTURE window series has been designed for passive construction. It enables construction of large windows with large glazing, which combine the highest level of thermal insulation with the ability to obtain heat coming from solar energy. In production of FUTURE windows we apply 3 or 4-glazing units with the use of noble gas – krypton.

Lift and slide door: Perfect solution for the demanding CLIENTS

Lift and slide system (HS) has been designed for demanding Clients who value the high quality of construction and modern design. The main advantage of this system is the use of large-

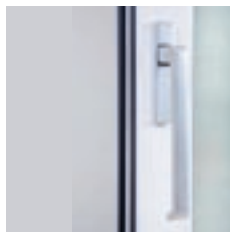

-glazing constructions, which is possible due to the application of innovative profiles and other solutions. This gives an impression of merging of two areas: home and outdoor.

Despite its large size, HS slide door work quietly and are easy to operate.

The application of low sill increases not only its aesthetical value, but also its comfort of use.

Low sill provides optimal thermal insulation with high static parameters.

All elements of hardware are included in the profile and flushed with its surface, which gives a perfect design.

Seals are made from the highest quality of EPDM, which provides exceptional tightness and resistance to weather conditions.

OFFER FOR THE FUTURE

Windows, doors and aluminum facades

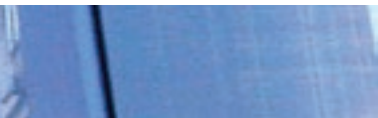

Aluminium profile which have excellent insulation and static properties, guarantee unlimited space arrangement possibilities, which are unavailable for PVC profiles. Application of paint coating enables the use of a wide colour range in all types

of gloss, texture and structure, as well as metallic coatings. Aluminium production may be distinguished by its exceptional strength and resistance to weather conditions.

Our production of aluminium products is based only on solutions of renowned system providers. The experience in the design and production of aluminium windows, doors and facades

allow us to prepare complex curtain walls windows, doors, shop windows, conservatories and skylights.
